Microsoft Azure

Workplace Intelligence Accelerator

Product development teams

Gain data-driven insights to help product teams unleash their true potential

Product developers need to be as productive and efficient as possible to deliver innovative high-quality products and services. Workplace insights can help pinpoint the processes and tools that boost performance and worker wellbeing.

The **Workplace Intelligence Accelerator** is a packaged analytical BI application that helps you **uncover and leverage the key drivers of productivity and success** for product development teams. It provides a holistic view of data from existing Microsoft tools and is securely deployed on Azure within your own environment.

Challenges

- Workday practices are difficult to measure and understand what changes could enable productivity

- Sources of tech debt are challenging to identify

- Data-driven insights on accelerator performance are needed to determine which tool is best for a given task

- Institutional knowledge is lost when top performers leave their jobs

- Product quality and release velocity are impacted when teams work with incomplete and inaccurate metrics

[25% decrease in available labor pool in the tech industry](#) while the number of posted jobs nearly doubled over the same period.*

Benefits

Pinpoint and reduce sources of tech debt, distraction, and disruption

Reduce friction by optimizing tools to automate task and workflow initiation

Find and replicate processes that maximize developer productivity

Build a holistic accelerator with tools already in your environment

Identify the best technologies for a given task or function

Create a strong technical culture by retaining most talented developers

Neudesic

Workplace metrics viewed holistically through a single dashboard

View the details of your product development teams' projects to help optimize their performance.

Learn where your teams succeed or struggle so you can enable changes in schedules or tasks that empower them to focus, grow, and create.

Gain insights that help your development teams reach their true potential

Kick-off	Proof of value	Proof of concept
Learn more about the **Neudesic Workplace Intelligence Accelerator** built on Microsoft Azure and see a demo.	See a deeper platform demonstration based on your product development teams' specific workflow and work volume needs.	Build and deploy a POC with the support of your Microsoft technical specialist and partners.

With your content and workflow, create POV in 1-3 days.

With ECIF-funded backend integration, create a POC in 2-5 weeks.

Join the Workplace Intelligence Accelerator pilot program

For a limited time, Microsoft is offering a special pilot program for the **Workplace Intelligence Accelerator** to customers interested in helping us shape the accelerator roadmap. Financial offsets may be available to cover pilot program costs.

Get started today
Contact your Microsoft specialist for a demo, pilot program details, and next steps.
